AKSHAYA DEVI

Java Full Stack Developer

+91 8122641294 | muthukumarakshayadevi@gmail.com | GitHub | LinkedIn | Chennai, Tamil Nadu.

Professional Summary

Java Full Stack Developer skilled in **Java, Spring Boot, React.js, REST APIs, and MySQL**, with hands-on experience building **end-to-end web applications**. Designed and developed a **Smart Predictive Hospital Queue and Appointment Management System** handling **4 core modules** (Patients, Doctors, Departments, Queue) with **real-time priority-based queue logic**. Strong foundation in **OOP, CRUD operations, database design, and Git-based version control**, with a focus on writing **clean, maintainable, production-ready code**.

Technical Skills

Programming: Java, JavaScript, SQL
Frontend: HTML5, CSS3, JavaScript, Bootstrap, React.js
Backend: Java, Spring Boot, REST APIs, Microservices
Database: MySQL
Concepts: OOP, CRUD Operations, JPA, JPQL, API Integration
Tools: Git, GitHub, VS Code, Eclipse/STS

Internship Experience

Java Full Stack Development – SLA Institute **Mar 2026 – Aug 2026**

- Learned **Java, OOP, Spring Boot, REST APIs, and Microservices** through practical full-stack development.
- Developed frontend applications using **HTML, CSS, JavaScript, Bootstrap, and React.js**.
- Worked with **MySQL** for database management, SQL queries, and CRUD operations.
- Practiced integrating **frontend, backend, REST APIs, and databases** to build full-stack applications.

Main Project

Smart Hospital Queue System
Technologies: Java, Spring Boot, React.js, MySQL, JPA, REST APIs

- Engineered a **full-stack hospital management system** spanning **4 modules** (Patient, Department, Doctor, Queue) with complete CRUD functionality via **15+ RESTful API endpoints** built in Spring Boot.
- Designed a **priority-based queue algorithm** supporting **3 urgency levels** (NORMAL, PRIORITY, EMERGENCY), automatically resequencing patients in real time to reduce manual triage effort.
- Built a **4-state queue lifecycle** (WAITING → SERVING → COMPLETED/CANCELLED) using **Spring Data JPA and JPQL** for efficient queue ordering and next-patient retrieval.
- Developed a **responsive React.js dashboard** with dedicated views for Patients, Departments, Doctors, and Queue management, fully integrated with backend REST APIs.
- Connected the application to a **MySQL relational database**, implementing normalized schema design across all modules.
- Implemented **global exception handling and input validation** to improve data integrity and reduce runtime errors across API endpoints.
- Managed source control and collaborative development using **Git and GitHub**, following structured commit practices.
- Optimized backend performance by implementing efficient JPQL queries and indexed database lookups, reducing average API response time for queue retrieval operations.
- Designed a **modular Spring Boot architecture** with clear separation of controller, service, and repository layers to improve code maintainability and scalability.
- Tested API endpoints using **Postman** to validate request/response flows, error handling, and edge cases across all CRUD operations before frontend integration.

Education

B.Sc. Chemistry – A.V.C College (Autonomous), Mannampandal
CGPA: 7.5 | **2022 – 2025**

Certifications

- **Application Developer** – Web & Mobile (PMKVY 4.0) – March 2025
- **HTML, CSS, and JavaScript for Beginners** – IBM Developer Skills Network – July 2026
